

Dao Thi Thoan

Business Analyst

I work as a Business Analyst who has skill in eliciting requirements, defining business requirements, and reporting them back to stakeholders. Moreover, I can analyze data on customers' behaviors before, during, and after using a product or service. And I'm always ready to help the company grow with my best efforts.

Work Experience

Business Analyst | Full-time

AEQUITAS

Jun 2025 – Present
On board

- Analyzed product features and business processes to understand project scope.
- Gathered, clarified, and documented customer requirements through meetings and discussions.
- Proposed practical solutions aligned with business goals and system capabilities.
- Created Business Requirement Documents (BRD), Functional Specifications (FSD), and process flow diagrams.

Business Analyst | Full-time

Mediatech

Feb 2023 – May 2025
2 year 4 months

- Analyzing business requirements from the Project Manager and team leader, providing solutions aligned with the company's development strategy.
- Conducting user, market, and product research to define business processes and design necessary features for products like Portal One, Tuongtac.tv, and AI-based content editing systems.
- Designing wireframes and mockups with Figma, collaborating closely with the development team to ensure feasibility and alignment with the project goals.
- Creating and managing business documentation such as WBS, SRS, flowcharts, activity diagrams, wireframes, and prototypes throughout the project lifecycle.
- Participating in User Acceptance Testing (UAT), providing direct support to the development team to ensure the accuracy and clarity of requirements.
- Developing user manuals and conducting training sessions on new features for relevant stakeholders.
- Designing and implementing administrative processes (e.g., Leave requests, Overtime requests,...) using the Bitrix24 platform.

Business Analyst | Part-time

sPhoton Technology

Mar 2022 – Jan 2023
11 months

- Elicited and analyzed business requirements from stakeholders, defining functional specifications and proposing solutions tailored to project needs.
- Designed use case diagrams, flowcharts, activity diagrams, and managed business documentation such as SRS and WBS to support system development and testing.
- Worked closely with the development team to ensure correct implementation of requirements and compliance with project timelines.
- Participated in UAT, provided support for product deployment, and conducted user training to ensure smooth transitions during project rollouts.
- Managed over 20 change requests during the project lifecycle, ensuring that all modifications were documented and communicated effectively across teams.
- Fully participated in the end-to-end development lifecycle of key projects: DHG (KPI registration and management system) and Qualified Partner (on-demand companion booking app).

Skills

Capabilities

- Collecting and analyzing business requirements; clarifying scope and managing change
- Writing detailed documentation: URD, SRS, Business Rules, User Guide
- Modeling business processes using UML (Use Case, Activity, State, ...) and BPMN
- Solid understanding of the Agile/Scrum development lifecycle; participating in sprint planning, backlog grooming, and progress tracking
- Supporting UAT, managing acceptance testing, and conducting end-user training
- Effective communication with stakeholders, including PO, developers, testers, and cross-functional teams

Tools

- Prototyping/Wireframing: Figma, Balsamiq
- Diagram Tools: Draw.io, Miro, Microsoft Visio
- Project & Issue Management: Remind, Jira, Confluence
- Basic SQL: Writing simple queries, understanding data storage and entity design
- Office Tools: Microsoft Word, Excel, PowerPoint
